

## How to use a Chain Cleaner Machine

Tools required:

- Chain Cleaner machine (Scrubber)

[We recommend the Union Chain Scrubber](#)

- Chain Cleaner fluid

[We recommend the Blubike Bio Chain Cleaner](#)

- Some decent chain lubrication

[We recommend the Pedros Syn Lube 60ml](#)

- Cloth or rag to dry chain

1. Secure the bike in an upright position, such as a Work stand.
2. Remove the top cover from the Chain Machine and fill it to the Fluid Level+mark on the side with Chain Cleaner fluid only. (Image 1)

NOTE: Never use solvents, acetone or alcohol in the Cleaner machine. This will cause the plastic casing of the machine to break down or melt

Image 1

3. With the black handle facing the Rear Derailleur, place the machine under the chain and push up until the chain sits completely in the grooves in the machine. (Image 2)

Image 2

4. Pull the black handle out and hook it around the back of the Rear Derailleur cage, allowing you to have one hand free for movements.
5. Place the top cap over the chain and secure it. (Image 3)

Image 3

6. Rotate the cranks anti-clockwise (back pedal) to run the chain solution around the brushes to clean the chain. You should rotate the cranks at least 10-12 times or until the chain looks clean. (Image 4)

**Image 4**

7. After the chain has been cleaned, remove the lid from the machine and take it away from the chain. It is a good idea to wash the Cleaner machine out after each use to prolong its life.
8. Using a lint free cloth or rag, dry the chain completely to remove all Cleaner fluid residues. (Image 5)

**Image 5**

9. After every cleaning operation it is absolutely necessary to lubricate the chain. One drop of oil per roller is recommended for proper lubrication and performance. (Image 6)
